Degree: B.E - AI & DS

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 7\_COD\_Question 2

Attempt : 2 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

## **Input Format**

The first line contains two integers, n and table\_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

### **Output Format**

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

## Sample Test Case

Input: 5 10 21 31 41 51 61

```
3
    31 60 51
    Output: Value 31: Found
    Value 60: Not Found
    Value 51: Found
    Answer
   #include <stdio.h>
    #define MAX 100
    #define EMPTY -1
    void initializeTable(int table[], int size) {
    for (int i = 0; i < size; i++) {
    table[i] = EMPTY;
    }
    int linearProbe(int table[], int size, int num) {
    int index = num % size;
    int start = index:
    while (table[index] != EMPTY) {
index = (index + 1) % size;
```

```
if (index == start) {
    return -1;
    return index;
    void insertIntoHashTable(int table[], int size, int arr[], int n) {
    for (int i = 0; i < n; i++) {
    int index = linearProbe(table, size, arr[i]);
    if (index != -1) {
    table[index] = arr[i];
    }
    int searchInHashTable(int table[], int size, int num) {
int index = num % size;
    int start = index;
    while (table[index] != EMPTY) {
      if (table[index] == num) {
      return 1:
    }
     index = (index + 1) \% size;
     if (index == start) {
      break;
    return 0;
int main() {
      int n, table_size;
      scanf("%d %d", &n, &table_size);
      int arr[MAX], table[MAX];
      for (int i = 0; i < n; i++)
         scanf("%d", &arr[i]);
      initializeTable(table, table_size);
      insertIntoHashTable(table, table_size, arr, n);
                                                         241801326
      int q, x;
   scanf("%d", &q);
      for (int i = 0; i < q; i++) {
```

241801326

241801326

```
scanf("%d", &x);
if (searchInHashTable(table, table_size, x))
    printf("Value %d: Found\n", x);
else
                                                                                        24,80,326
                                                          24,801326
             printf("Value %d: Not Found\n", x);
        }
        return 0;
     Status: Correct
                                                                                Marks: 10/10
